

REGISTERED TRADE MARK FOR WOOD PRODUCTS

BALTIC STICKS

EST 2004

WWW.BALTICSTICKS.COM

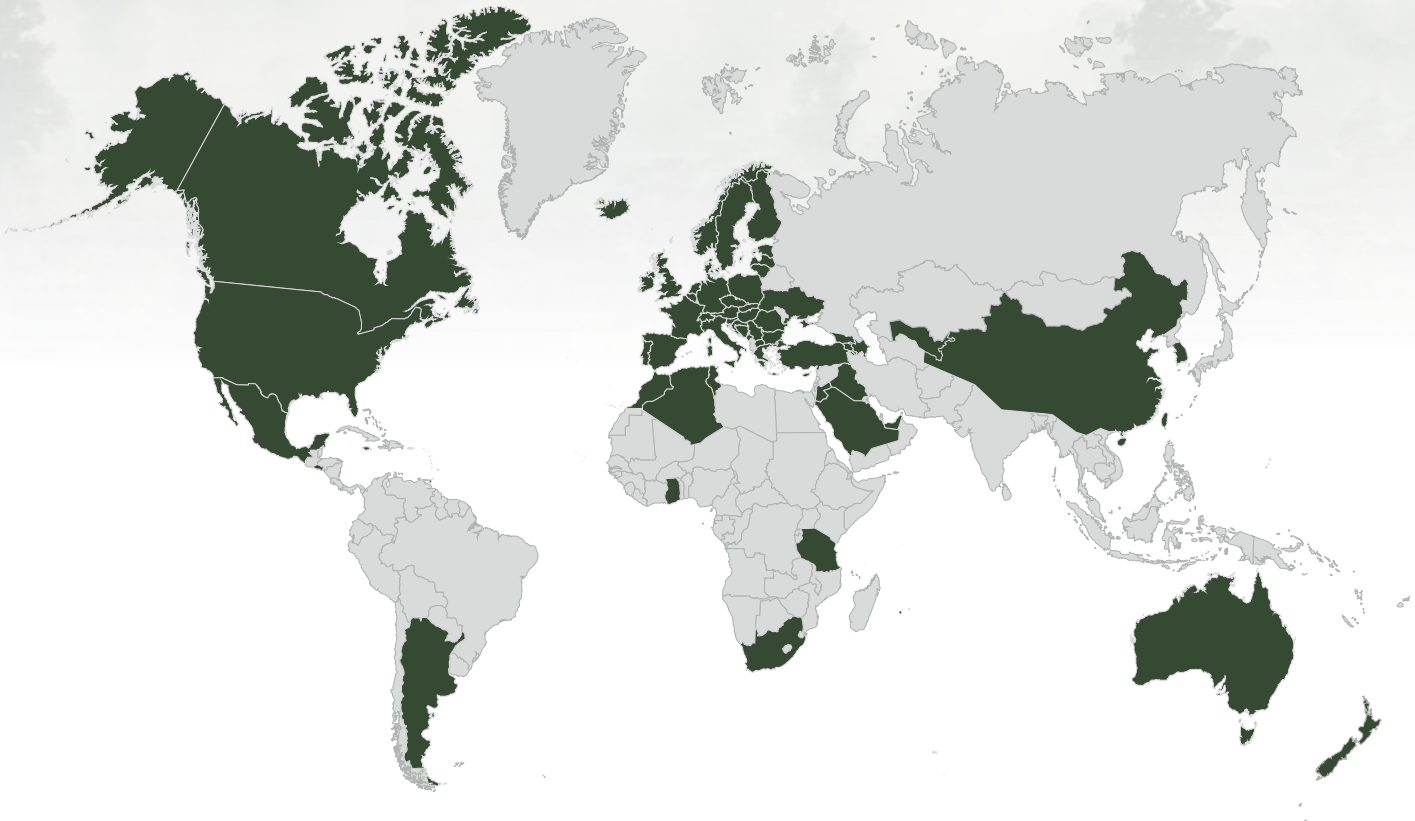

ABOUT US

At BALTIC STICKS, we have proudly been a trusted global supplier of high-quality ice cream sticks since 2004. Our expertise, however, extends far beyond this core product. We offer a diverse range of wooden products, including beverage stirrers, wooden cutlery, meat skewers, firewood products, and more. Our commitment to quality and sustainability makes us a preferred partner for businesses worldwide.

The company has implemented a production safety, hygiene and quality management system in accordance with the BRCGS Global Standard for packaging materials, which ensures that our customers receive only the highest quality products. Additionally, we test our products annually in the “Eurofins” laboratory to ensure their suitability for contact with food.

Sustainability is at the heart of everything we do. We do not offer plastic products, and our wooden products are FSC certified. Our factory is powered solely by green energy, underscoring our dedication to environmental responsibility. We also process waste to create firewood and sawdust briquettes, which are used as biofuel, ensuring the responsible use of natural resources.

**WE EXPORT OUR WOODEN PRODUCTS
TO MORE THAN 60 COUNTRIES
ALL OVER THE WORLD!**

MATERIALS USED

BIRCH

Birch is a popular choice because it is durable, splinter-resistant, and easily cut into thin, uniform shapes. It can sometimes have a slightly more pronounced flavor, compared to beech although it generally is mild. This makes a **great cost-effective choice**, making it ideal for use in food-related products like ice cream sticks.

BEECH

Beech wood is also smooth but slightly denser. Importantly, beech wood is **taste-free**, making it a great material for food-related items. It does not impart any unwanted flavors or smells when in contact with food, including ice cream. However, it is about 30% more expensive in comparison to birch.

BAMBOO

It is all about sustainability! It takes 15 times less to grow and harvest a bamboo than a tree. Bamboo is used because of its **environmental sustainability, smooth texture, and cost-effectiveness**. It offers a taste-neutral, biodegradable alternative to traditional wood options while maintaining strength and safety during use.
